Note: The cohort size is defined as first-time, full-time, degree-seeking students who entered ASU in the fall semester or the previous summer semester and is full-time in the fall. First-time students are those students who have not attended any postsecondary institution prior attending ASU. Full-time students are undergraduates who enrolled in twelve or more credit hours. Students' degree and program listed above were declared at their matriculation term. Blank Retention Rate means there were not any student in the cohort for that particular program.

◆ Abstract

Engagement in physical activity provides numerous benefits to college students, including improved academic performance, enhanced self-confidence, and overall physical well-being. Historically Black Colleges and Universities (HBCUs) have reported higher rates of overweight, obesity, and physical inactivity compared to non-HBCU institutions. This study examined physical activity levels among students at an HBCU using the Physical Activity Vital Sign (PAVS), a self-reported assessment of moderate and vigorous activity. An online survey was administered to students who completed a fitness course during the Spring 2025 semester. Results indicated that 51% of participants met federal physical activity guidelines, exceeding national college averages. The PAVS tool was identified as useful for individualized student assessments and could support institutional strategies to promote physical activity. Findings underscore the importance of integrating physical activity requirements and interventions to improve health outcomes and foster a culture of wellness on campus.

◆ Introduction

Engagement in physical activity provides benefits to college students, including improved GPA, enhanced self-confidence, and overall physical well-being.

Historically Black Colleges and Universities (HBCUs) have reported higher rates of overweight, obesity, and physical inactivity compared to non-HBCU institutions.

Approximately 50% of students at HBCUs are overweight or obese, while the overweight rate is 30.2% for men and 60.2% of men at non-HBCUs (Sa et al.2016).

Approximately 50% of students at HBCUs are overweight or obese, while the overweight rate is 30.2% for men and 60.2% of men at non-HBCUs (Sa et al.2016).

Approximately 50% of students at HBCUs are overweight or obese, while the overweight rate is 30.2% for men and 60.2% of men at non-HBCUs (Sa et al.2016).

The purpose of this study was to build a contextualized physical activity program within an HBCU setting. The study was to evaluate the effectiveness of the program on the health of ASU students.

◆ Methods & Materials

A survey was administered online via SurveyMonkey. A link to the survey was emailed to all students upon completion of an ASU Fitness Course Spring 2025 semester.

The Physical Activity Vital Sign (PAVS) tool, a self-reported physical activity assessment. This tool assesses both moderate and vigorous physical activity through specific questions. The responses were then analyzed to determine the percentage of students meeting the federal physical activity guidelines.
